Chapter 1

Introduction

Mark Elliot Zuckerberg (; born May 14, 1984) is an American businessman and programmer who co-founded the social media service Facebook and its parent company Meta Platforms. He is its chairman, chief executive officer (CEO), and controlling shareholder. Zuckerberg briefly attended Harvard College, and launched Facebook there in February 2004 with his roommates Eduardo Saverin, Andrew McCollum, Dustin Moskovitz and Chris Hughes. Zuckerberg took the company public in May 2012 with majority shares. He became the world's youngest self-made billionaire in 2008 at age 23 and has consistently ranked among the world's wealthiest people. According to Forbes, Zuckerberg's estimated net worth stood at US\$220 billion as of December 2025. He has used his funds to organize multiple large donations, including the establishment of the Chan Zuckerberg Initiative. A film based on Zuckerberg's early career, legal troubles and initial success with Facebook, *The Social Network*, was released in 2010. His prominence and fast rise in the technology industry has prompted political and legal attention. He has been the subject of multiple lawsuits regarding the creation and ownership of the website as well as issues such as user privacy.

Chapter 3

Career and Contributions

Early life

Mark Elliot Zuckerberg was born on May 14, 1984, in White Plains, New York, to Jewish parents Dr. Edward Zuckerberg, a dentist, and Karen (née Kempner), a psychiatrist. He and his three sisters (Arielle, Randi, and Donna) were raised in a Reform Jewish household in Dobbs Ferry, New York. Their great-grandparents were emigrants from Austria, Germany, and Poland. Zuckerberg initially attended Ardsley High School before transferring to Phillips Exeter Academy. He was captain of the fencing team.

Career

Facebook

In January 2004, Zuckerberg began writing code for a new website. On February 4, 2004, Zuckerberg launched "Thefacebook", originally located at thefacebook.com, in partnership with his roommates Eduardo Saverin, Andrew McCollum, Dustin Moskovitz, and Chris Hughes. An earlier inspiration for Facebook may have come from Phillips Exeter Academy, the prep school from which Zuckerberg graduated in 2002. It published its own student directory, "The Photo Address Book", which students referred to as "The Facebook". Such photo directories were an important part of the student social experience at many private schools. With them, students were able to list attributes such as their class years, their friends, and their telephone numbers. Six days after the site launched, three Harvard seniors, Cameron Winklevoss, Tyler Winklevoss, and Divya Narendra, accused Zuckerberg of intentionally misleading them into believing that he would help them build a social network called HarvardConnection.com, when he was using their ideas to build a competing product. The three complained to The Harvard Crimson, and the newspaper began an investigation in response. While Zuckerberg tried to convince the editors not to run the story, he also broke into two of the editors' email accounts by using their private login data logs from TheFacebook. Following the official launch of the Facebook social media platform, the three filed a lawsuit against Zuckerberg that resulted in a settlement. The agreed settlement was for 1.2 million Facebook shares and \$20 million in cash (equivalent to \$28,047,543 in 2025). Zuckerberg's Facebook started off as just a "Harvard thing" until he decided to spread it to other schools, enlisting the help of roommate and co-founder Dustin Moskovitz. They began with Columbia University, New York University, Stanford University, Dartmouth College, Cornell University, University of Pennsylvania, Brown University, and Yale University. Zuckerberg dropped out of Harvard in his second year in order to complete the project. Zuckerberg, Moskovitz and the other co-founders moved to Palo Alto, California, where they leased a small house that

served as an office. Over the summer, Zuckerberg met Peter Thiel, who invested in his company. They got their first office in mid-2004. According to Zuckerberg, the group planned to return to Harvard, but eventually decided to remain in California, where Zuckerberg appreciated the "mythical place" of Silicon Valley, the center of computer technology in California. They had already turned down offers by major corporations to buy the company. The same year, speaking at Y Combinator's Startup School course at Stanford University, Zuckerberg made a controversial assertion that "young people are just smarter" and that other entrepreneurs should bias towards hiring young people. Earlier, in April 2009, Zuckerberg had sought the advice of former Netscape CFO Peter Currie regarding financing strategies for Facebook. On July 21, 2010, Zuckerberg reported that Facebook had reached the 500-million-user mark. In 2010, Steven Levy, who wrote the 1984 book *Hackers: Heroes of the Computer Revolution*, wrote that Zuckerberg "clearly thinks of himself as a hacker". Zuckerberg said that "it's OK to break things" "to make them better". Facebook instituted "hackathons" held every six to eight weeks where participants would have one night to conceive of and complete a project. The company provided music, food, and beer at the hackathons, and many Facebook staff members, including Zuckerberg, regularly attended. "The idea is that you can build something really good in a night", Zuckerberg told Levy. "And that's part of the personality of Facebook now ... It's definitely very core to my personality." In 2007, Zuckerberg was added to MIT Technology Review's TR35 list as one of the top 35 innovators in the world under the age of 35. Vanity Fair magazine named Zuckerberg number 1 on its 2010 list of the Top 100 "most influential people of the Information Age". Zuckerberg ranked number 23 on the Vanity Fair 100 list in 2009. In 2010, Zuckerberg was chosen as number 16 in New Statesman's annual survey of the world's 50 most influential figures. On October 1, 2012, Zuckerberg met with then-Russian Prime Minister Dmitry Medvedev in Moscow to stimulate social media innovation in Russia and to boost Facebook's position in the Russian market. Russia's communications minister tweeted that Medvedev persuaded Zuckerberg to open a research center in Moscow instead of trying to lure away Russian programmers. In 2012, Facebook had roughly 9 million users in Russia, while domestic clone VK had around 34 million. On August 19, 2013, The Washington Post reported that Zuckerberg's Facebook profile was hacked by an unemployed web developer. At the 2013 TechCrunch Disrupt conference, held in September, Zuckerberg stated that he was working towards registering the 5 billion people who were not connected to the Internet as of the conference on Facebook. Zuckerberg then explained that this was intertwined with the aim of the Internet.org project, whereby Facebook, with the support of other technology companies, sought to increase the number of people connected to the internet. Zuckerberg was the keynote speaker at the 2014 Mobile World Congress (MWC), held in Barcelona, Spain, in March 2014, which was attended by 75,000 delegates. Various media sources highlighted the connection between Facebook's focus on mobile technology and Zuckerberg's speech, stating that mobile represented the future of the company. Alongside other American technology figures such as Jeff Bezos and Tim Cook, Zuckerberg hosted visiting Chinese politician Lu Wei, known as the "Internet czar" for his influence in the enforcement of China's online policy, at Facebook's headquarters on December 8, 2014. The meeting occurred

after Zuckerberg participated in a Q&A session at Tsinghua University in Beijing, China, on October 23, 2014, where he conversed in Mandarin Chinese. "On January 1, 2013, Mr. Zuckerberg's annual base salary was reduced to \$1." In June 2016, Business Insider named Zuckerberg one of the "Top 10 Business Visionaries Creating Value for the World" along with Elon Musk and Sal Khan, due to the fact that he and his wife "pledged to give away 99% of their wealth-then estimated at \$55.0 billion" (equivalent to \$72,240,700,516 in 2025). On May 25, 2017, at Harvard's 366th commencement day, Zuckerberg, after giving a commencement speech, received an honorary degree from Harvard. In January 2019, Zuckerberg laid plans to integrate an end-to-end encrypted system for three major social media platforms, including Facebook, Instagram and WhatsApp. On August 14, 2020, Facebook integrated the chat systems for Instagram and Messenger on both iOS and Android devices. The update encouraged cross-communication between Instagram and Facebook users.

Other roles and projects

A month after Zuckerberg launched Facebook in February 2004, i2hub, another campus-only service, created by Wayne Chang and focusing on peer-to-peer file sharing, was launched. At the time, both i2hub and Facebook were gaining the attention of the press and growing rapidly in users and publicity. In August 2004, Zuckerberg, Andrew McCollum, Adam D'Angelo, and Sean Parker launched a competing peer-to-peer file sharing service called Wirehog, a precursor to Facebook Platform applications, which was launched in 2007. In 2013, Zuckerberg launched Internet.org, which he described as an initiative to provide Internet access to the five billion people without it as of the launch date. The project faced significant opposition in India, where activists said its limited internet ran counter to the principle of net neutrality; Zuckerberg responded by saying that a limited internet was better than no internet. Internet.org was shut down in India in February 2016. Zuckerberg is a board member of the solar sail spacecraft development project Breakthrough Starshot, which he co-founded with Yuri Milner and Stephen Hawking in 2016. In 2026, Zuckerberg was appointed to the President's Council of Advisors on Science and Technology (PCAST) by President Donald Trump.

Lawsuits

ConnectU lawsuits

Harvard students Cameron Winklevoss, Tyler Winklevoss, and Divya Narendra accused Zuckerberg of intentionally making them believe he would help them build a social network called HarvardConnection.com (later called ConnectU). They filed a lawsuit in 2004; it was dismissed on a technicality on March 28, 2007. It was refiled soon thereafter in a federal court in Boston. Facebook countersued in regards to Social Butterfly, a project put out by The Winklevoss Chang Group, an alleged partnership between ConnectU and i2hub. On June 25, 2008, the case settled and Facebook agreed to transfer over 1.2 million common shares and pay \$20 million in cash

(equivalent to \$30,013,960 in 2025). In November 2007, court documents were posted on the website of 02138, a magazine that catered to Harvard alumni. They included Zuckerberg's Social Security number, his parents' home address, and his girlfriend's address. Although Facebook filed to have the documents removed, the judge ruled in favor of 02138.

Eduardo Saverin

In 2005, Facebook co-founder Eduardo Saverin filed a lawsuit against Zuckerberg and Facebook, alleging that Zuckerberg had illegally spent Saverin's money on personal expenses. The lawsuit was settled out of court and, although terms of the settlement were sealed, the company affirmed Saverin's title as co-founder of Facebook, and Saverin agreed to stop talking to the press.

Pakistan criminal investigation

In June 2010, then-Pakistani Deputy Attorney General Muhammad Azhar Siddique launched a criminal investigation into Zuckerberg and Facebook co-founders Dustin Moskovitz and Chris Hughes after a "Draw Muhammad" contest was hosted on Facebook. The investigation also named the anonymous German woman who created the contest. Siddique asked the country's police to contact Interpol to have Zuckerberg and the three others arrested for blasphemy. On May 19, 2010, Facebook's website was temporarily blocked in Pakistan until Facebook removed the contest from its website at the end of May. Siddique also asked its UN representative to raise the issue with the United Nations General Assembly.

Paul Ceglia

In June 2010, Paul Ceglia, the owner of a wood pellet fuel company in Allegany County, upstate New York, filed a suit against Zuckerberg, claiming 84 percent ownership of Facebook and seeking monetary damages. According to Ceglia, he and Zuckerberg signed a contract on April 28, 2003, that an initial fee of \$1,000 (equivalent to \$1,750 in 2025) entitled Ceglia to 50% of the website's revenue, as well as an additional 1% interest in the business per day after January 1, 2004, until website completion. Zuckerberg was developing other projects at the time, among which was Facemash, the predecessor to Facebook, but did not register the domain name thefacebook.com until January 1, 2004. The Facebook management dismissed the lawsuit as "completely frivolous". Facebook spokesman Barry Schnitt told a reporter that Ceglia's counsel had unsuccessfully sought an out-of-court settlement. On October 26, 2012, federal authorities arrested Ceglia, charging him with mail and wire fraud and of "tampering with, destroying and fabricating evidence in a scheme to defraud the Facebook founder of billions of dollars". Ceglia is accused of fabricating emails to make it appear that he and Zuckerberg discussed details about an early version of Facebook, although after examining their emails, investigators found there was no mention of Facebook in them. Some law firms withdrew from the case before it was initiated and others after Ceglia's arrest.

Hawaiian land ownership

In 2014, Zuckerberg purchased 700 acres of land on the Hawaiian island of Kauai. In January 2017, Zuckerberg filed eight "quiet title and partition" lawsuits against hundreds of native Hawaiians to claim small tracts of land that they owned within his acreage. Zuckerberg responded to criticisms in a Facebook post, stating that the lawsuits were a good faith effort to pay the partial owners of the land their "fair share". When he learned that Hawaiian land ownership law differs from that of the other 49 states, he dropped the lawsuits. Zuckerberg stated that he regretted not taking the time to understand the process and its history before moving ahead. Eventually, an auction helped sell the pockets of land. Zuckerberg paid \$17 million (equivalent to \$20,198,330 in 2025) to add 110 acres to his contentious 1,500-acre estate in Kauai, in December 2021. At least \$145 million was spent by Zuckerberg on land in Kauai that he is developing into a massive 1,450-acre retreat that is partially gated off. In a January Instagram post, he uploaded a picture of a massive steak and joked that "of all my projects, this is the most delicious," indicating that he is rearing beer-fed Wagyu and Angus cattle on the property, involving his daughters in the process.

Testimonies before U.S. Congress

On April 10 and 11, 2018, Zuckerberg testified before the United States Senate Committee on Commerce, Science, and Transportation regarding the usage of personal data by Facebook in relation to the Facebook–Cambridge Analytica data scandal. He called the whole affair a breach of trust between Aleksandr Kogan, Cambridge Analytica, and Facebook. Zuckerberg refused requests to appear to give evidence on the matter to a Parliamentary committee in the United Kingdom. On October 1, 2020, the US Senate Commerce Committee unanimously voted to issue subpoenas to the CEOs of three top tech firms, including Zuckerberg, Google's Sundar Pichai and Twitter's Jack Dorsey. The subpoenas aimed to force the CEOs to testify about the legal immunity the law affords tech platforms under Section 230 of the Communications Act of 1934. US Republicans argued that the law unduly protected social media companies against allegations of anti-conservative censorship. On March 25, 2021, Zuckerberg testified before the House Energy and Commerce Committee regarding Facebook's role in the spread of misinformation and hate speech on the platform. During the hearing, he was questioned about Facebook's handling of user data, its role in the January 6, 2021, attack on the US Capitol Building, and its efforts to combat misinformation and hate speech. Zuckerberg acknowledged that Facebook had a responsibility to address these issues and outlined the steps that the company is taking to improve its policies and practices. The hearing was part of a broader effort by Congress to hold tech companies accountable for their role in shaping public discourse and protecting user privacy. In a January 2024 Senate Judiciary Committee hearing on child safety and social media platforms, Zuckerberg, along with other tech CEOs, were questioned about their companies' practices. During the hearing, he stood up, turned toward the audience, and apologized to the families of children who were victims of online abuse and harm.

Opposition to Meta proposals for teenagers' mental health

Court documents allege that Zuckerberg personally rejected Meta's proposals to improve teenagers' mental health. He consistently opposed efforts to enhance well-being on Facebook and Instagram, overriding senior executives such as Instagram head Adam Mosseri and Global Affairs President Nick Clegg, as revealed in an ongoing lawsuit. Internal communications disclosed in the Massachusetts-initiated legal action depict Zuckerberg's resistance to better protect over 30 million teens on Instagram in the U.S., highlighting his substantial influence on Meta's decisions impacting billions of users. These documents also shed light on occasional tensions between Zuckerberg and other Meta officials advocating for improved user well-being.

New Mexico lawsuit on Meta's lack of restriction on AI bots

The lawsuit alleges that Meta "failed to stem the tide of damaging sexual material and sexual propositions delivered to children" on Facebook and Instagram. Evidence showed that Mark Zuckerberg approved allowing minors to access AI chatbot companions that safety staffers warned were capable of sexual interactions.

Depictions in media

The Social Network

A movie based on Zuckerberg and the founding years of Facebook, *The Social Network*, was released on October 1, 2010, starring Jesse Eisenberg as Zuckerberg. After Zuckerberg was told about the film, he responded, "I just wished that nobody made a movie of me while I was still alive." Also, after the film's script was leaked on the Internet and it was apparent that the film would not portray Zuckerberg in a wholly positive light, he stated that he wanted to establish himself as a "good guy". The film is based on the book *The Accidental Billionaires* by Ben Mezrich, which the book's publicist once described as "big juicy fun" rather than "reportage". The film's screenwriter Aaron Sorkin told *New York* magazine, "I don't want my fidelity to be the truth; I want it to be storytelling", adding, "What is the big deal about accuracy purely for accuracy's sake, and can we not have the true be the enemy of the good?". Upon winning the Golden Globe Award for Best Picture on January 16, 2011, producer Scott Rudin thanked Facebook and Zuckerberg "for his willingness to allow us to use his life and work as a metaphor through which to tell a story about communication and the way we relate to each other". Sorkin, who won for Best Screenplay, retracted some of the impressions given in his script: I wanted to say to Mark Zuckerberg tonight, if you're watching, Rooney Mara's character makes a prediction at the beginning of the movie. She was wrong. You turned out to be a great entrepreneur, a visionary, and an incredible altruist. In January 2011, Zuckerberg made a surprise guest appearance on *Saturday Night Live*, which was hosted by Jesse Eisenberg. They both said it was the first time they had met. Eisenberg asked Zuckerberg, who had been critical of his portrayal by the film, what he thought of the movie.

Zuckerberg replied, "It was interesting." In a subsequent interview about their meeting, Eisenberg explained that he was "nervous to meet him, because I had spent now, a year and a half thinking about him ...". He added, "Mark has been so gracious about something that's really so uncomfortable ... The fact that he would do SNL and make fun of the situation is so sweet and so generous. It's the best possible way to handle something that, I think, could otherwise be very uncomfortable."

Other depictions

Zuckerberg voiced himself on an episode of *The Simpsons* titled "Loan-a Lisa", which first aired on October 3, 2010. In the episode, Lisa Simpson and her friend Nelson encounter Zuckerberg at an entrepreneurs' convention. Zuckerberg tells Lisa that she does not need to graduate from college to be wildly successful, referencing Bill Gates and Richard Branson as examples. On October 9, 2010, *Saturday Night Live* lampooned Zuckerberg and Facebook. Andy Samberg portrayed the role of Zuckerberg. Zuckerberg himself was reported to have been amused, "I thought this was funny." Stephen Colbert awarded a "Medal of Fear" to Zuckerberg at the Rally to Restore Sanity and/or Fear on October 30, 2010, "because he values his privacy much more than he values yours". Zuckerberg appeared in the climax of 2013 documentary film *Terms and Conditions May Apply*. The *South Park* episode "Franchise Prequel" mocked him. According to CNET, he was portrayed as "a rosy-cheeked bully nerd who utters strange noises, makes peculiar kung fu gestures and turns up wherever he likes in people's houses".

Donations and Chan Zuckerberg Initiative

Zuckerberg founded the Startup:Education foundation. It was reported in September 2010 that he had donated \$100 million (equivalent to \$147,642,301 in 2025) to Newark Public Schools, the public school system of Newark, New Jersey. Critics noted the timing of the donation as being close to the release of *The Social Network*, which painted a somewhat negative portrait of Zuckerberg. Zuckerberg responded to the criticism, saying, "The thing that I was most sensitive about with the movie timing was, I didn't want the press about *The Social Network* movie to get conflated with the Newark project. I was thinking about doing this anonymously just so that the two things could be kept separate." Newark Mayor Cory Booker stated that he and New Jersey Governor Chris Christie had to convince Zuckerberg's team not to make the donation anonymously. The money was largely wasted, according to journalist Dale Russakoff. In 2010, Zuckerberg, Bill Gates, and investor Warren Buffett signed The Giving Pledge, in which they said they would donate to charity at least half of their wealth over the course of time, and invited others among the wealthy to donate 50 percent or more of their wealth to charity. In December 2012, Zuckerberg and his wife Priscilla Chan said that over the course of their lives they would give the majority of their wealth to "advancing human potential and promoting equality" in the spirit of The Giving Pledge. In December 2013, Zuckerberg announced a donation of 18 million Facebook

shares to the Silicon Valley Community Foundation, to be executed by the end of the month—based on Facebook's valuation as of then, the shares totaled \$990 million in value (equivalent to \$1,368,321,429 in 2025). Later that month, the donation was recognized as the largest charitable gift on public record for that year. The Chronicle of Philanthropy placed Zuckerberg and his wife at the top of the magazine's annual list of 50 most generous Americans for 2013, having donated roughly \$1 billion to charity (equivalent to \$1,382,142,857 in 2025). In October 2014, Zuckerberg and his wife donated \$25 million (equivalent to \$33,999,859 in 2025) to combat the Ebola virus disease, specifically the West African Ebola virus epidemic. The couple endowed the foundation of the San Francisco General Hospital in February 2015 with \$75 million (equivalent to \$101,870,701 in 2025), which was the biggest individual donation to a U.S. public hospital. The hospital honored them by renaming itself as The Priscilla Chan and Mark Zuckerberg San Francisco General Hospital and Trauma Center. Later in 2020, the San Francisco Board of Supervisors passed a near-unanimous, non-binding measure condemning the renaming, citing concerns that a public hospital should not be named after an individual whose social media platform is accused of "endangering public health, spreading misinformation, and violating privacy". On December 1, 2015, the couple pledged to transfer 99% of their Facebook shares, then valued at \$45 billion (equivalent to \$61,122,420,329 in 2025), to the Chan Zuckerberg Initiative (CZI). The funds would not be transferred immediately, but over the course of their lives. Instead of forming a charitable corporation to donate the value of the stock to, as Bill Gates, Warren Buffett, Larry Page, Sergey Brin and other billionaires have done, Zuckerberg and Chan chose to use the structure of a limited liability company (LLC). Some journalists and academics have said the CZI conducts philanthrocapitalism. In 2016, CZI gave \$600 million (equivalent to \$804,908,486 in 2025) to create the tax-exempt charity Chan Zuckerberg Biohub, a collaborative research space in San Francisco's Mission Bay district near the University of California, San Francisco, with the intent to foster interaction and collaboration between scientists at UCSF, University of California, Berkeley, and Stanford University. Intellectual property generated would be jointly owned by Biohub and the discoverer's home institution. Unlike foundations such as the Bill and Melinda Gates Foundation, which open up all research funded to unrestricted access and reuse by the public, Biohub retained the right to commercialize any research it funds. Inventors will have the option of making their discoveries open-source, with permission from Biohub. To increase access to scientific research and promote open science, CZ Biohub requires its investigators and staff scientists to publish submitted manuscripts and related data on preprints servers such as bioRxiv. Amidst the COVID-19 pandemic, Zuckerberg announced \$25 million (equivalent to \$31,101,324 in 2025) in grants to support local journalism that was impacted by the pandemic and \$75 million (equivalent to \$93,303,973 in 2025) in advertisement purchases in local newspapers by Facebook, Inc., where Facebook would market itself.

Politics

In 2002, Zuckerberg registered to vote in Westchester County, New York, where he grew up, but did not cast a ballot until November 2008. Then Santa Clara County Registrar of Voters Spokeswoman, Elma Rosas, told Bloomberg that Zuckerberg is listed as "no preference" on voter rolls, and he voted in at least two of the past three general elections, in 2008 and 2012. Zuckerberg has never revealed his own political affiliation or voting history. In February 2013, Zuckerberg hosted his first ever fundraising event for then-New Jersey Governor Chris Christie. His particular interest on this occasion was education reform, and Christie's education reform work focused on teachers unions and the expansion of charter schools. Later that year, Zuckerberg hosted a campaign fundraiser for then-Newark mayor Cory Booker, who was running in the 2013 New Jersey special Senate election. In September 2010, with the support of Governor Chris Christie, Booker obtained a US\$100 million (equivalent to \$147,642,301 in 2025) pledge from Zuckerberg to Newark Public Schools. In December 2012, Zuckerberg donated 18 million shares to the Silicon Valley Community Foundation, a community organization that includes education in its list of grant-making areas. On April 11, 2013, Zuckerberg led the launch of a 501(c)(4) lobbying group called FWD.us. The founders and contributors to the group were primarily Silicon Valley entrepreneurs and investors, and its president was Joe Green, a close friend of Zuckerberg. The goals of the group include immigration reform, improving the state of education in the United States, and enabling more technological breakthroughs that benefit the public, yet it has also been criticized for financing ads advocating a variety of oil and gas development initiatives, including drilling in the Arctic National Wildlife Refuge and the Keystone XL pipeline. In 2013, numerous liberal and progressive groups, such as The League of Conservation Voters, MoveOn.org, the Sierra Club, Democracy for America, CREDO, Daily Kos, 350.org, and Presente and Progressives United agreed to either not buy or pull their Facebook ads for at least two weeks, in protest of ads funded by FWD.us that were in support of oil drilling and the Keystone XL pipeline, and in opposition to Obamacare among Republican United States senators who back immigration reform. A media report on June 20, 2013, revealed that Zuckerberg actively engaged with Facebook users on his own profile page after the online publication of a FWD.us video. In response to a claim that the FWD.us organization is "just about tech wanting to hire more people", the Internet entrepreneur replied, "The bigger problem we're trying to address is ensuring the 11 million undocumented folks living in this country now and similar folks in the future are treated fairly." In June 2013, Zuckerberg joined Facebook employees in a company float as part of the annual San Francisco Lesbian, Gay, Bisexual, and Transgender Pride Celebration. The company first participated in the event in 2011, with 70 employees, and this number increased to 700 for the 2013 march. The 2013 pride celebration was especially significant, as it followed a U.S. Supreme Court ruling that deemed the Defense of Marriage Act (DOMA) unconstitutional. When questioned about the mid-2013 PRISM scandal at the TechCrunch Disrupt conference in September 2013, Zuckerberg stated that the U.S. government "blew it". He further explained that the government performed poorly in regard to the protection of the freedoms of its citizens, the economy, and companies. Zuckerberg placed a statement on his Facebook wall on December 9, 2015, which said that he wants "to add my voice in support of

Muslims in our community and around the world" in response to the aftermath of the November 2015 Paris attacks and the 2015 San Bernardino attack. The statement also said that Muslims are "always welcome" on Facebook, and that his position was a result of the fact that, "as a Jew, my parents taught me that we must stand up against attacks on all communities." On February 24, 2016, Zuckerberg sent out a company-wide internal memo to employees formally rebuking employees who had crossed out handwritten "Black Lives Matter" phrases on the company walls and had written "All Lives Matter" in their place. Facebook allows employees to free-write thoughts and phrases on company walls. The memo was then leaked by several employees. As Zuckerberg had previously condemned this practice at previous company meetings, and other similar requests had been issued by other leaders at Facebook, Zuckerberg wrote in the memo that he would now consider this overwriting practice not only disrespectful, but "malicious as well". According to Zuckerberg's memo, "Black Lives Matter doesn't mean other lives don't – it's simply asking that the black community also achieves the justice they deserve." The memo also noted that the act of crossing something out in itself "means silencing speech, or that one person's speech is more important than another's". Zuckerberg also said in the memo that he would be launching investigations into the incidents. The New York Daily News interviewed Facebook employees who commented anonymously that, "Zuckerberg was genuinely angry about the incident and it really encouraged staff that Zuckerberg showed a clear understanding of why the phrase 'Black Lives Matter' must exist, as well as why writing through it is a form of harassment and erasure." In January 2017, Zuckerberg criticized Donald Trump's executive order to harshly limit immigrants and refugees from some countries. He also funded a state-level ballot initiative for the 2020 general election that would raise taxes by altering California's Proposition 13 to require the tax assessment of commercial and industrial properties in the state at market rate. Especially in his twenties, Zuckerberg had financially supported various progressive causes such as immigration reform and social justice. At least among Republicans, he was generally seen as pro-liberal. In an August 2024 letter to the House Judiciary Committee however, Zuckerberg stated he regretted not doing more to resist pressure from the Biden administration to censor content related to COVID-19. He also noted he no longer intends to donate towards election infrastructure; Republicans had seen those contributions as non-neutral, labeling them "Zuckerbucks". By 2024, Zuckerberg was discouraging employee activism at Facebook, and according to The New York Times, had privately described his politics as leaning towards libertarianism or classical liberalism. In Donald Trump's book Save America, published in September 2024, Trump described Zuckerberg's visits to the White House and wrote, "We are watching him closely, and if he does anything illegal this time he will spend the rest of his life in prison — as will others who cheat in the 2024 Presidential Election." Two months later, they dined at the Mar-a-Lago resort, with Zuckerberg reportedly aiming to mend his and his firm's relationship with Trump after the latter won the election. Around the same time, Meta reportedly donated \$1 million to a Trump-related fund. In January 2025, he said: "We now have a U.S. administration that is proud of our leading companies, prioritizes American technology winning and that will defend our values and interests abroad." Zuckerberg was one of a handful of technology leaders

positioned prominently at Trump's inauguration. In March 2025, Zuckerberg mentioned his relationship with the Trump administration while seeking a favorable settlement in, *FTC v. Meta*, an antitrust case where the Federal Trade Commission (FTC) was asking for \$30 billion. Zuckerberg has expressed opposition to EU regulations of his company saying "we're going to work with President Trump to push back on governments around the world that're going after American companies."

Personal life

Marriage and children

Zuckerberg met fellow student Priscilla Chan at a frat party during his second year at Harvard. They began dating in 2003. In September 2010, Chan, who was a medical student at the University of California, San Francisco at the time, moved into his rented house in Palo Alto, California. They married on May 19, 2012, in the grounds of his mansion in an event that also celebrated her graduation from medical school. Zuckerberg revealed in July 2015 that they were expecting a baby girl and that Chan had previously experienced three miscarriages. Their first daughter was born in December 2015. They announced in a Chinese New Year video that their daughter's Chinese name is Chen Mingyu (Chinese: 陈明玉). Their second daughter was born in August 2017. Zuckerberg and his wife welcomed their third daughter in March 2023 and announced the news across his social media pages. The couple also have a Puli dog named Beast, who had over two million followers on Facebook as of 2019. Zuckerberg commissioned the visual artist Daniel Arsham to build a 7-foot-tall sculpture of his wife, which was unveiled in 2024. As of 2025, the Zuckerberg family lives on a large compound in the Crescent Park neighborhood of Palo Alto. In November 2025, WIRED published an investigation of complaints from neighbors about a school that was operating on the Zuckerberg property without a permit. In March 2026, Zuckerberg and Chan purchased a home on Indian Creek, Florida, a wealthy enclave known as the "Billionaires' Bunker", for a Miami-Dade County record of \$170 million, an unfinished home that had an asking price of \$200 million.

Recognition and public image

Time named Zuckerberg one of the most influential people in the world in 2008, 2011, 2016, 2019 and 2025, and nominated him as a finalist several other times. He was named the Time Person of the Year in 2010, the same year when Facebook eclipsed more than half a billion users. He was also included in the Time 100 AI list in 2024. In December 2016, Zuckerberg was ranked tenth on the Forbes list of the World's Most Powerful People. In the Forbes 400 list of wealthiest Americans in 2023, he was ranked eighth with a personal wealth of \$106 billion (equivalent to \$112,008,519,004 in 2025). In October 2024, he became the second richest person in the world. As of October 2025, Zuckerberg's net worth was estimated at \$251 billion by Forbes, making him the third richest person in the world. In addition to his estate in Hawaii, Zuckerberg has a \$320

million (equivalent to \$380,203,856 in 2025) real estate portfolio that includes ten homes in Palo Alto, San Francisco, and Lake Tahoe, totaling over 1,400 acres. Zuckerberg shifted his style in 2024. Originally known wearing the same gray shirt and jeans in most public appearances, Zuckerberg started wearing gold chains and trendier streetwear. Writing for Vanity Fair, Kase Wickman described Zuckerberg's "new look" as a "MAGA rebrand", claiming that his change in fashion parallels Meta's efforts to appease the Trump administration. Zuckerberg denied hiring a stylist.

Yacht fleet

In 2017, Zuckerberg called for action to stop global warming in a commencement speech at Harvard University. Seven years later, he purchased the mega-yacht Launchpad (formerly Project 1010) for about \$300 million; the vessel is approximately 118–119 m (387 ft) and was delivered by Feadship in 2024. Zuckerberg also operates a smaller support/shadow yacht, Wingman, built by Damen Yachting in 2014 (approx. 67 m/220 ft), which functions as a tender and logistics platform for Launchpad; media have placed its value around \$30 million. In early 2025, multiple outlets reported the two-vessel fleet operating together, including in the Arctic. Launchpad was tracked at Longyearbyen (Svalbard), where local activists staged protests over emissions. During the Easter period of 2025, Sustainability Times described a roughly 5,280-mile voyage to Norway's fjords using the two-yacht fleet for a heliskiing trip. The article asserted by using Wingman's helipad offshore, operations avoided helicopter landings on Norwegian soil, which are generally restricted for tourism. Earlier, in late 2024 and early 2025, lifestyle media reported that Launchpad sailed roughly 4,800 miles to French Polynesia and waited in Tahiti for weeks without Zuckerberg boarding.

Religious beliefs and other interests

Born and raised in a Reform Jewish household, Zuckerberg later identified himself as an atheist. However, he said in 2016 that, "I went through a period where I questioned things, but now I believe religion is very important." During 2017, he and his wife began a tour of America "to visit every state in the union and learn more about a sliver of the nearly two billion people who regularly use the social network". He met with farmers and business owners, and spoke at the Emanuel African Methodist Episcopal Church, where a 2015 shooting took place. In 2022, Zuckerberg took up training in both mixed martial arts (MMA) and Brazilian jiu-jitsu (BJJ), and has been open about his love for the two sports. He competed in a BJJ tournament on May 6, 2023, and won both a silver and gold medal in gi and no gi, competing at white belt. In July 2023, he was promoted to blue belt in Brazilian jiu-jitsu by Dave Camarillo. Four months later, Zuckerberg announced that he was preparing to make his MMA debut but had suffered an anterior cruciate ligament injury in training that required surgery and had delayed this.

Zuckerberg Rips Damages Sought In Social Media Lawsuit By California, Others - Deadline

Deadline | 2026-07-08

Mark Zuckerberg might think those Kylie Jenner-branded Meta smart glasses are cool, but you know what is really cool? Not having to pay California and three other states virtually the entire valuation of your company. The Social Network script paraphrasing aside, that's the position Meta's multi-firm attorneys are taking in the multi-plaintiff suit over litigation the Instagram parent company and other social media platforms are facing in federal court. "A sanction of that size has no analog in the history of consumer protection enforcement," Meta's defense team(s) proclaimed in a deep-dive filing this week. Related Stories News Zucked Up! Meta Disables AI Image Generator After CAA & SAG-AFTRA Trashed It: "Missed The Mark" News Meta Removes Muse Image AI Feature After Backlash: "Missed The Mark" Taking a massive bite outta Meta's bottom line, state attorneys general like California's Rob Bonta (hello David Ellison, see you soon) and his colleagues in Colorado, Kentucky and New Jersey allege the Zuckerberg outfit actively misleads consumers. To the quartet, those so-called deceptive data moves and more translates into "unfair or unconscionable trade practices." Watch on Deadline Practices that should force Meta to pay up to \$1.4 trillion in damages if the verdict is in the states' favor. Yes, you read that right — \$1.4 trillion. Just to put that in perspective: Meta's full net worth is just over \$1.5 trillion. "The AGs ask this Court to make Meta pay over one trillion dollars," the somewhat redacted filing from Meta lead firm Covington & Burling states. "That figure is the construct of lawyers, assembled by mixing and matching data from disparate sources to manufacture the largest possible sum, and by counting the same individuals many times over," the Ashley M. Simonsen signed document adds, mocking the math and asking Judge Yvonne Gonzalez Rogers to toss most of the demands. "The AGs cannot identify any UPA or COPPA case imposing penalties approaching that amount. Meta has

not found any case, under any cause of action, where one defendant was ordered to pay over one trillion dollars—or any number remotely close to that staggering figure.” As various local school boards settle with the tech giants in this latest social media case about to go before an Oakland jury next month, 29 states overall are still claiming that Meta, as well as Snap and TikTok, violated the Children’s Online Privacy Protection Act via data collection practices. If this all sounds a bit like the teen-centric trials in L.A. and New Mexico from earlier this year, it is because they are similar. In fact, challenging the rules of the digital road the tech lords have lucratively paved for themselves, the cases are but three of more than 2,000 such suits moving through a plethora of courts across the land against social media companies. As they have in the L.A. and New Mexico cases it lost and is appealing, Meta insists its algorithm-driven products are safe and that responsibility for underage use lies with parents not corporations. The Silicon Valley-based company also takes a swing at state pols like Bonta in what is an increasingly partisan battlefield. “The plaintiffs’ outlandish calculations have no basis in fact or law,” a Meta spokesperson told Deadline after the filings by their lawyers this week. “We’ll continue to defend ourselves against headline-seeking demands that are untethered from reality.” For their part, Bonta’s office is turning the other cheek to Meta’s damages reaction. “Our lawsuit alleges Meta has prioritized profits over the safety of kids and fueled the mental health crisis we see impacting a generation of American children,” a spokesperson for California’s top lawman told Deadline. “The California Department of Justice looks forward to holding Meta fully accountable at trial in August. Beyond this, we have no other updates at this time.” In one update, Meta stock shed 2% Wednesday to close at \$603.12. They have fallen nearly 9% in 2026 to date as investors assess its heavy spending on AI infrastructure and consumer products like a new line of smart glasses. In the meantime, while no one is saying anything publicly, Bonta, New York’s Letitia James and a collection of other Blue State AGs are putting the final touches on an action on the \$110 billion acquisition of Warner Bros Discovery by Ellison’s Paramount Skydance. Delayed a few weeks, the potential suit aims to halt all the fast-tracked approvals the deal has already received from self-declared Ellison “good friend” Donald Trump and his administration. The government never should have gave these clowns a pass. They need to be held accountable for whatever gets posted on their platform, the fact that they aren’t shows preferential treatment and that is what is really unprecedented. If social media can not be held liable, then neither should the media. It’s hard to find any good guys in this. Part of me thinks the states are just conducting political lawfare. On the other hand, Facebook helped steal the 2020 presidential election and deserve to go bankrupt. Have no problem with suing social media, but the likes of NY, Colorado and California receiving anything is just STUPID. They have done more harm to the youth, than social media could every do. Then again, I come from a time where accountability comes into play... It’s way past time people are held accountable for their actions, instead of attempting to find excuses for bad parenting. I have far more concern for Red State youth as they rank lowest on academic testing and college attendance but higher on the need for public assistance. These states stay Red due to a literacy crisis. Much of the Bible Belt cannot even comprehend their own Bibles. Comprehensive is necessary to a functioning democracy The government is a small group of

people. Anyone who doesn't understand this doesn't have the education to read a dictionary, that's a 3rd grade reading level. Hey Stephen California ranks in the lower third of academic testing and California has one of the highest poverty rates in the nation and also sits high in the list in regards to the amount of people who get government benefits. I don't understand why we continue to point fingers and pretend like it's only one groups problem, because it's all of our problem. Enough with the tribalism, we are in this together and we need to lift ALL boats so that EVERYONE can participate and contribute. What happened to being kind and lending a hand to your fellow man when they stumble? You forgot to mention Kentucky. You want to hold parents in Kentucky responsible too, right? Your agenda here is so clear. Just sad. I believe you may need to re-evaluate if social media has harmed you. For example, we're doing just fine in Colorado. Your fellow Americans have a lot more in common with you than you may realize from the filter bubbles and social media you've been consuming. If you find yourself worried about a place you're not in and people making decisions for themselves without your input – all of that is a sign that social media is harming you. Consider deleting all of your accounts. I did that years ago, and it has changed my perspective about those who live in my country. Sounds like you have a problem with holding social media companies accountable. Does bad parenting make it okay for Meta to violate the rights of children? Seems to be what you're implying.

Mark Zuckerberg Is Turning Meta Into a Bigger Chipmaker. Its Newest In-House AI Chip Enters Production in September. - Yahoo Finance

Yahoo Finance | 2026-07-11

Shares of Meta Platforms (NASDAQ: META) rose about 6% on Friday after Reuters reported on Thursday that the social media giant plans to start manufacturing its own data-center AI (artificial intelligence) chip in September. The chip, code-named Iris, was designed with help from Broadcom (NASDAQ: AVGO) and will be built by Taiwan Semiconductor Manufacturing (NYSE: TSM), according to an internal memo the news organization reviewed. The market's enthusiasm is easy to understand. Meta expects to spend as much as \$145 billion on AI infrastructure this year, and that spending has been my biggest concern with the stock. Custom silicon is aimed squarely at getting more computing power out of every one of those dollars. Missed Nvidia in 2009? This Rare Signal Is Flashing Again. In 2009, a "Double Down" signal flashed for a little-known chipmaker called Nvidia. For the first time in years, that same "Total Conviction" signal is flashing for a company 1/100th the size of Nvidia. Continue » Iris is reportedly part of a four-generation family of chips Meta is designing in-house, and the program appears to be ahead of where many investors probably assumed. Testing on the chip took about six weeks and turned up no major issues, according to the memo. Even more, Meta reportedly plans to launch a new chip about every six months through 2027. That is a much faster cadence than the industry norm of about one new chip per year. And the infrastructure these chips would support is enormous.

Meta plans to bring about 7 gigawatts of computing capacity online this year and double its total to 14 gigawatts in 2027, according to the report, with Iris augmenting the graphics processing units (GPUs) the company buys from Nvidia and Advanced Micro Devices rather than replacing them. Still, there's a message here for chip investors. One of the AI boom's biggest spenders just showed a credible path to needing Nvidia somewhat less over time -- while handing more business to Broadcom, which helps design the chip, and TSMC, which builds it. Nvidia's chips remain the backbone of Meta's computing plans. But every in-house chip Meta deploys is pricing pressure Nvidia could eventually feel. None of this spending would matter much to shareholders if Meta's core business were sputtering. It isn't. Meta's first-quarter revenue rose 33% year over year to \$56.3 billion -- an acceleration from 24% growth in the fourth quarter of 2025 and 22% growth for full-year 2025. And the profits followed. The company posted a 41% operating margin for the period, and earnings per share of \$10.44 grew 62% year over year, though a one-time \$8.03 billion tax benefit added \$3.13 per share to that figure. For a company of Meta's size, growth like this is extraordinary. "We had a milestone quarter with strong momentum across our apps and the release of our first model from Meta Superintelligence Labs," said CEO Mark Zuckerberg in the company's first-quarter earnings release. That growth is what pays for the build-out. In its first-quarter update, Meta raised its 2026 capital expenditure forecast to a range of \$125 billion to \$145 billion (up from a prior range of \$115 billion to \$135 billion) while guiding for second-quarter revenue of \$58 billion to \$61 billion. Capital expenditures in the first quarter alone were \$19.8 billion. Of course, custom chips don't mean a smaller budget. And a reported timeline may still slip. Even if Iris works exactly as planned, Meta isn't cutting its spending. It's doubling its computing capacity and trying to make each unit of that capacity cost less. If the AI investments don't ultimately produce more engagement and better ad economics, in-house silicon may not be enough to offset challenges the company could face down the road. But the price investors are paying for this story looks reasonable. At about \$672 per share as of this writing, Meta trades at about 24 times earnings and about 19 times forward earnings, even though Meta grew revenue 33% last quarter. And unlike a chip supplier, Meta also controls the applications that all of that computing power serves. If the in-house chips deliver even part of the potential savings, the company's heavy spending could convert into earnings growth faster than the market currently expects. To me, the stock looks attractive here. Sure, Thursday's report probably doesn't lower Meta's AI bill. But it strengthens the case that the company can control the cost of a build-out it was going to attempt anyway. The Motley Fool Stock Advisor analyst team just identified what they believe are the 10 best stocks for investors to buy now... and Meta Platforms wasn't one of them. The 10 stocks that made the cut could produce monster returns in the coming years. Consider when Netflix made this list on December 17, 2004... if you invested \$1,000 at the time of our recommendation, you'd have \$407,004 !* Or when Nvidia made this list on April 15, 2005... if you invested \$1,000 at the time of our recommendation, you'd have \$1,244,599 !* Now, it's worth noting Stock Advisor's total average return is 924% — a market-crushing outperformance compared to 210% for the S&P 500. Don't miss the latest top 10 list, available with Stock Advisor , and join an investing community built by individual investors for individual investors. Daniel Sparks

Fidji Simo says Mark Zuckerberg gave her one piece of health advice years ago, and she wishes she had listened - Business Insider

Business Insider | 2026-07-10

Fidji Simo, who worked at Facebook before later joining OpenAI, said she regretted not taking up Mark Zuckerberg offer's of a year of medical leave as she struggled with POTS.

As tech titans debated AI at Sun Valley, Mark Zuckerberg quietly wore an 85-year-old Patek Philippe that was built to predict the future, a \$300,000 perpetual calendar so rare that only 210 were ever made - Luxurylaunches

Luxurylaunches | 2026-07-10

Mark Zuckerberg's fascination with high-end watches has taken another historically significant turn. The Meta CEO was spotted at the Allen & Company Sun Valley Conference wearing a vintage Patek Philippe Perpetual Calendar Ref. 1526J, an understated 34mm watch in 18k yellow gold that happens to occupy one of the most important chapters in the history of complicated wristwatches. Introduced in 1941, the Patek Philippe Ref. 1526 is widely recognized as the world's first perpetual-calendar wristwatch to be produced in series. Before its arrival, perpetual-calendar wristwatches were largely one-off creations made for individual clients. Patek Philippe changed that by turning one of watchmaking's most sophisticated complications into a catalogue model, establishing a blueprint that would influence generations of perpetual calendars to come. The Ref. 1526 did more than bring the perpetual calendar into serial production. It established a visual formula that remains instantly recognizable more than eight decades later. Two apertures below 12 o'clock display the day and month, while a subsidiary dial at 6 o'clock combines the date, moon phase and small seconds. Despite the complexity beneath its dial, the Ref. 1526 is remarkably restrained. Its 34mm Calatrava-style case is compact by modern standards, allowing the sophisticated mechanics to remain hidden behind the appearance of an elegant dress watch. The example spotted on Zuckerberg appears to feature a French-language calendar, with the apertures displaying "DIM" for Dimanche, or Sunday, and "JUN" for Juin, or June. The "J" in 1526J stands for jaune, the French word for yellow, identifying the watch's

yellow-gold case. Approximately 210 examples of the Ref. 1526 were produced between 1941 and 1952. Most were made in yellow gold, a much smaller number were cased in pink gold, and just one example is known to exist in stainless steel. Inside is the manually wound Calibre 12-120 Q, based on a Victorin Piguet movement and equipped with 18 jewels and a Breguet balance spring. The craftsmanship extended beyond the movement. The hard-enamel dial was produced by the legendary Stern Frères, while most cases were supplied by renowned Geneva casemaker Vichet. Its moon-phase display features a gold moon disc, another tiny detail reflecting the extraordinary craftsmanship involved in creating these watches. A perpetual calendar mechanically keeps track of the varying lengths of months and leap years, automatically advancing through the irregularities of the Gregorian calendar. Patek Philippe has poetically described the complication as allowing a tiny mechanical machine to “foretell the future,” an especially fitting idea for a watch worn by one of the world’s most influential technology executives at a conference increasingly dominated by artificial intelligence. The Allen & Company Sun Valley Conference has been held annually in Idaho since 1983 and is often described as “summer camp for billionaires.” The invitation-only gathering brings together powerful figures from technology, media and finance for private meetings and informal conversations, with no public agenda or official guest list. That privacy is precisely what makes it a dealmaking incubator: Disney and ABC laid the groundwork for their 1995 merger there, and Bezos reportedly worked out his Washington Post purchase at the 2013 edition. This year the balance of power tilted firmly toward tech, with 2026 dominated by the AI set. Sam Altman, Dario Amodei, Sundar Pichai, Tim Cook and incoming Apple chief John Ternus were all in attendance, alongside Bezos, Gates and of course Zuckerberg. Image – X / @ThoughtCatalog At a gathering where much of the conversation inevitably revolves around what comes next, Zuckerberg’s choice of watch was particularly appropriate. While some of the world’s most powerful technology leaders were discussing the future, the Meta CEO had an approximately 85-year-old mechanical machine on his wrist that was engineered to anticipate it. With only around 210 examples ever produced and an estimated market value of approximately \$300,000, the Ref. 1526J is far more than another expensive vintage Patek Philippe. It is the watch that transformed the perpetual calendar from an exceptional one-off creation into a serially produced wristwatch and helped establish a design language that still defines the complication today.

EU warns Meta to change ‘addictive’ Facebook, Instagram features — or get big fines - New York Post

New York Post | 2026-07-10

The European Union’s tech regulator told Meta on Friday to make big changes to Facebook and Instagram’s “addictive” features — or face steep fines. The European Commission called out Mark Zuckerberg’s company for several specific features, including “highly personalized recommendations, autoplay and infinite scroll” that allegedly combine to keep users — including

vulnerable kids – hooked on social media. Firms can face fines of up to 6% of their annual revenue if they don't make changes to comply with the EU's Digital Services Act, a sweeping regulatory framework that requires Big Tech firms to maintain standards for the content and design of their apps. In a highly unusual move, the European Commission said Meta needs to nix features like infinite scroll and roll out new "screen time breaks" and tweak its recommendation system so it's "less engagement oriented." "The Commission's investigation indicates that Meta did not adequately assess the risks of its addictive design on the physical and mental wellbeing of users, including minors and vulnerable adults," the European Commission said in a press release. "These features fuel the user's urge to keep scrolling and shift the brain into 'autopilot mode', contributing to unhealthy habits and compulsive use," the agency added. Based on Meta's fiscal 2025 revenue, it's looking at potential fine of about \$12 billion – though the EU's penalties to date in similar cases have come in far below that level. EU investigators also found that Meta "disregarded available information about the time minors spend on Instagram or Facebook at night and how the optimization of its different formats – such as reels and stories – could lead to excessive or compulsive use of the services." "We disagree with these preliminary findings, which don't accurately take into account the significant steps we've taken to protect teens," a company spokesperson said in a statement. Meta noted that it has launched a Teen Accounts feature meant to shield kids from social media addiction, including by giving parents the option to block their access to Facebook and Instagram at night. Zuckerberg's company has faced intense scrutiny in both Europe and the US over its alleged role in fueling social media addiction and other forms of online harm. Earlier this year, the European Commission ruled that Meta had failed to stop users under age 13 from accessing its platforms. The Facebook and Instagram parent also faces a wave of more than 2,400 lawsuits in the US over its addictive features. It suffered back-to-back court losses earlier this year, one in Los Angeles and another in New Mexico, in what critics hailed as a "Big Tobacco moment" for social media .

Wyoming Officials Trace Rare Bacteria Back to Zuckerberg's \$800 Million 'Project Cosmo' - 24/7 Wall St.

24/7 Wall St. | 2026-07-10

The bacteria showed up in late February 2026, in routine wastewater samples pulled by the Cheyenne Board of Public Utilities. The public did not hear about it until June 26, 2026. On July 9, 2026, Wyoming Representative Harriet Hageman sent Mark Zuckerberg a letter demanding to

know why. The contamination at Meta (NASDAQ:META | META Price Prediction)'s \$800 million Cheyenne data center, known during development as Project Cosmo, is months old. The political story is only starting. The campus sits in south Cheyenne, spans roughly 715,000 to 800,000 square feet, and is not yet online, with operations expected in 2027. Meta builds through Goat Systems, a construction entity. That name matters because the Cheyenne Board of Public Utilities identified Goat Systems as the party on July 2, 2026 as the contamination source. The mechanism was a fill-and-flush, a routine procedure to prep cooling pipes before launch. Water from the BOPU was cycled through the cooling system, flushed to clear construction debris, and discharged into Cheyenne's reclaimed water system. What came back carried *Cupriavidus gilardii*, a soil-and-water bacterium rare in municipal systems. The BOPU revoked Goat Systems' industrial discharge privileges effective March 24, 2026. Officials still do not know where the bacterium originated. Crucially, the contaminated water did not enter Cheyenne's drinking water supply. A March 2026 study in the International Journal of Infectious Diseases documented only 32 human cases of *Cupriavidus* infection worldwide, with 10 deaths, nearly all in patients with weakened immune systems. This is a regulatory and disclosure story. Meta, through Fortis, said: "When the board shared that it found a substance in the city's wastewater, not public drinking water, Fortis immediately stopped discharging industrial wastewater and began hauling it offsite. Fortis also began its own water testing with an independent environmental specialist which has found no trace of the substance." Discharge privileges were pulled March 24. The public was told June 26. Hageman flagged that roughly three-month gap and asked Zuckerberg where wastewater is now going and whether closed-loop cooling can scale water use down safely. "Many are rightfully concerned about high water consumption rates by data centers in our communities where every drop of water is accounted for and needed, so I am even more concerned that this contamination seemingly came from your facility's closed-loop cooling system, a technology that is marketed as being a solution to high data center water consumption," she wrote, concluding: "Wyoming deserves information and consultation from the industries which plan to call our state home." Cheyenne councilman Mark Laybourn was blunter: "It's about the last thing we need right now. But it's a reality we're going to have to work through." Cheyenne receives roughly 15 inches of rainfall a year, making it one of America's driest state capitals. The BOPU has now suspended industrial wastewater acceptance from all data center fill-and-flush operations in the city. That is a policy response. Project Cosmo is a rounding error inside Meta's \$125 to \$145 billion 2026 capex program. Meta shares closed at \$631.48 on July 9, up 8.33% on the week. Prediction markets on Polymarket assigned a 91.5% probability of Meta hitting \$640 in July. One contamination event at one Wyoming construction site will not dent that. The systemic read is different. The same water and environmental exposure attaches to Microsoft (NASDAQ:MSFT), whose Q3 capex ran tens of billions, and Alphabet (NASDAQ:GOOGL), guiding to a comparably large sum in 2026 capex. A Benzinga tally put \$130 billion in data center projects delayed or blocked in Q1 2026, with 71% of Americans opposed to data centers near their homes. Cheyenne is the first case where a bacterial incident produced congressional scrutiny and a systemwide industrial discharge suspension. The beneficiary trade is water

infrastructure. Xylem (NYSE:XYL), a \$28.2 billion market cap water technology company, is already partnered with Dow on advanced water systems for data center cooling. Jefferies upgraded XYL to Buy with a \$140 target on July 2. Shares closed at \$118.89, still down 12.06% year to date. Watch over the next quarter whether other municipalities, particularly in Texas and Arizona, impose their own discharge suspensions. If they do, the AI infrastructure buildout meets its first hard local constraint, and water treatment names get repriced accordingly.

Mark Zuckerberg Took a Work Call on a Jet Ski — Here's Why No One Noticed - Entrepreneur

Entrepreneur | 2026-07-08

Meta CEO Mark Zuckerberg stands behind his company's products. The 42-year-old CEO recently vouched for Meta's \$800 smart glasses , insisting that the glasses allowed him to take calls in loud places with crystal-clear audio for both him and the call recipient. "I've taken business calls on a jet ski," he said in an interview published earlier this week with Complex. "The other person could not tell that I was on it." Zuckerberg said that the Meta glasses have a microphone placed in the nose pad, which only picks up necessary noise and allows for clear audio. He claimed that the audio clarity of the glasses is good enough that "you could literally be in a wind tunnel and it would sound completely clear to the person on the other side." This means that it is easier than ever to work while on the go — even on a jet ski. "You don't necessarily want to tell the other person that you're on a jet ski," Zuckerberg joked. Zuckerberg, one of the richest people in the world, is the face of Meta's lineup of smart glasses. The products range from the Ray-Ban Meta (Gen 2) at \$379 to the \$800 Meta Ray-Ban Display glasses, which are Meta's first glasses with a built-in display that Zuckerberg revealed in September. The Display glasses come with a wristband that picks up electrical signals in the arm so wearers can use subtle hand gestures to control the display. The screen shows alerts, texts, photos and live translations. Zuckerberg is betting that smart glasses will grow in popularity. He pointed out in the interview with Complex that Meta has a built-in market with the nearly two billion people globally who already wear glasses to correct their vision problems. He also said that smart glasses have the advantage of allowing users to stay " present " with the people around them in a way that phones cannot match. The AI assistant on the glasses has the powerful capability to "see what you see, hear what you hear, talk to you throughout the day," he said. He additionally compared the switch from smartphones to

smart glasses to the shift from flip phones to smartphones. “It felt pretty clear that in five years or whatever, all of the flip phones were going to be smartphones, and that’s basically how I feel about glasses today,” he said. Zuckerberg said in the interview with Complex that Meta has been working on the foundational technology for smart glasses since 2014. The company isn’t just looking back; it’s also planning ahead . Meta has a solid long-term vision for the category and is already preparing its 2028 smart glasses offerings. Smart glasses are one part of Zuckerberg’s effort to build “ personal superintelligence ,” or AI that surpasses human intelligence. In a public letter last year , Zuckerberg wrote that Meta’s goal is not to automate or change the workforce with AI, but to “bring personal intelligence to everyone” first and allow individuals to change their lives with it. “I am extremely optimistic that superintelligence will help humanity accelerate our pace of progress,” Zuckerberg wrote in the letter.
